

The pipe surface is often exposed to damage when used in praxis. This is a challenge for connections, which may cause leakage.

We know.....
The inner surface of the pipe is always perfect. We use that for sealing with the new invented and patented Isiflo® Seal Liner.

Function

With Isiflo® Seal Liner secures the tightness through a triple sealing:

- 1st seal: between the liner and the inside surface of the pipe.
- 2nd seal is between the pipe end and the coupling body.
- 3rd seal: the traditional seal of the coupling

Composite material

Produced in our strong composite material and designed with a "Venturi principle" to prevent pressure loss and flow restriction.

Features and benefits

- No need for special tools
- Time saving and easy installation
- No special qualification needed
- No preparation of the pipe is necessary
- Can be used on old pipes in the ground

Areas of application

- Potable water
- Gas
- Under pressure systems
- Compressed air
